Stage 1 Patent Suggestion

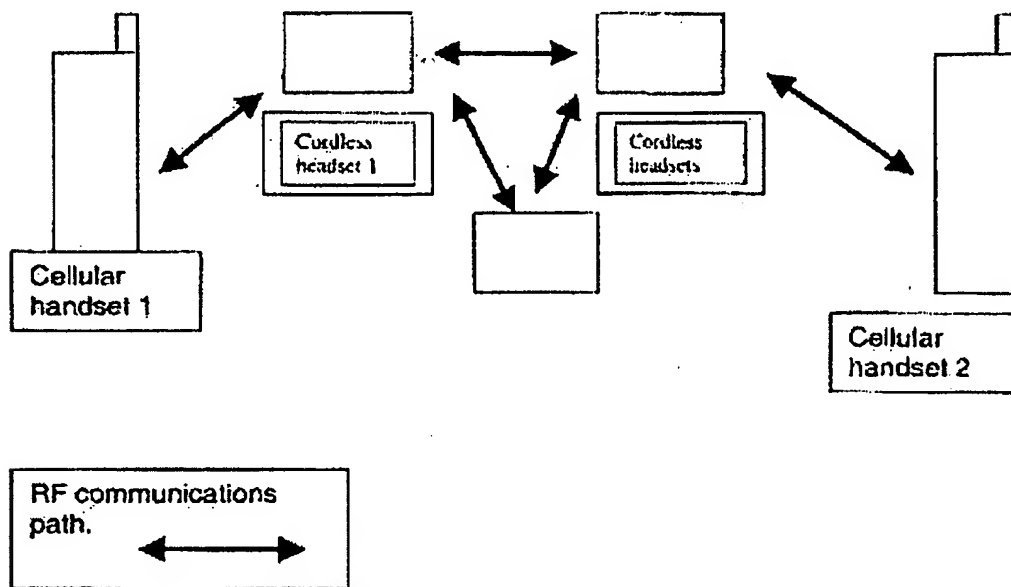

(45)

Stage 1 Patent SuggestionShort Title:

Cordless handsfree headset and short range communicator.

Details of Idea

- Please use drawings/sketches

- For Software inventions please explain in functional terms using flow diagrams.

Software is used to determine where the communications is directed to e.g. the cellular handset, another individual cordless headset or a general broadcast.

The logo for 'sendo' is displayed in a stylized, lowercase font. The letter 'o' is unique, featuring a horizontal line passing through its center, which extends slightly beyond the letter's boundaries.Stage 1 Patent Suggestion

Description of Closest Known Prior Art

- Please provide patent specifications/number or sketch if possible

A normal cordless headset provides a two way link to a cellular phone. License free handheld transceivers allow free 2 way communication between any number of users over a short range. This idea combines both, radio technology implementation can be UHF or Bluetooth.

Difference between Idea and Prior Art and Advantages Over Prior Art

All existing cordless handsfree only allow communication point to point i.e. from headset to the target cellular handset. This device allows this, plus communication to multipoint or other single points depending on software configuration.

The cellular handset is not required for all applications.

Possible applications are:

- Intercom
- Lecture/ general broadcast
